

# Exploiting Structure in Compressed Sensing Using Side Constraints – EXPRESS

Martin Haardt, Marius Pesavento, and Marc Pfetsch

## Low Rank Model and Sparse Representation

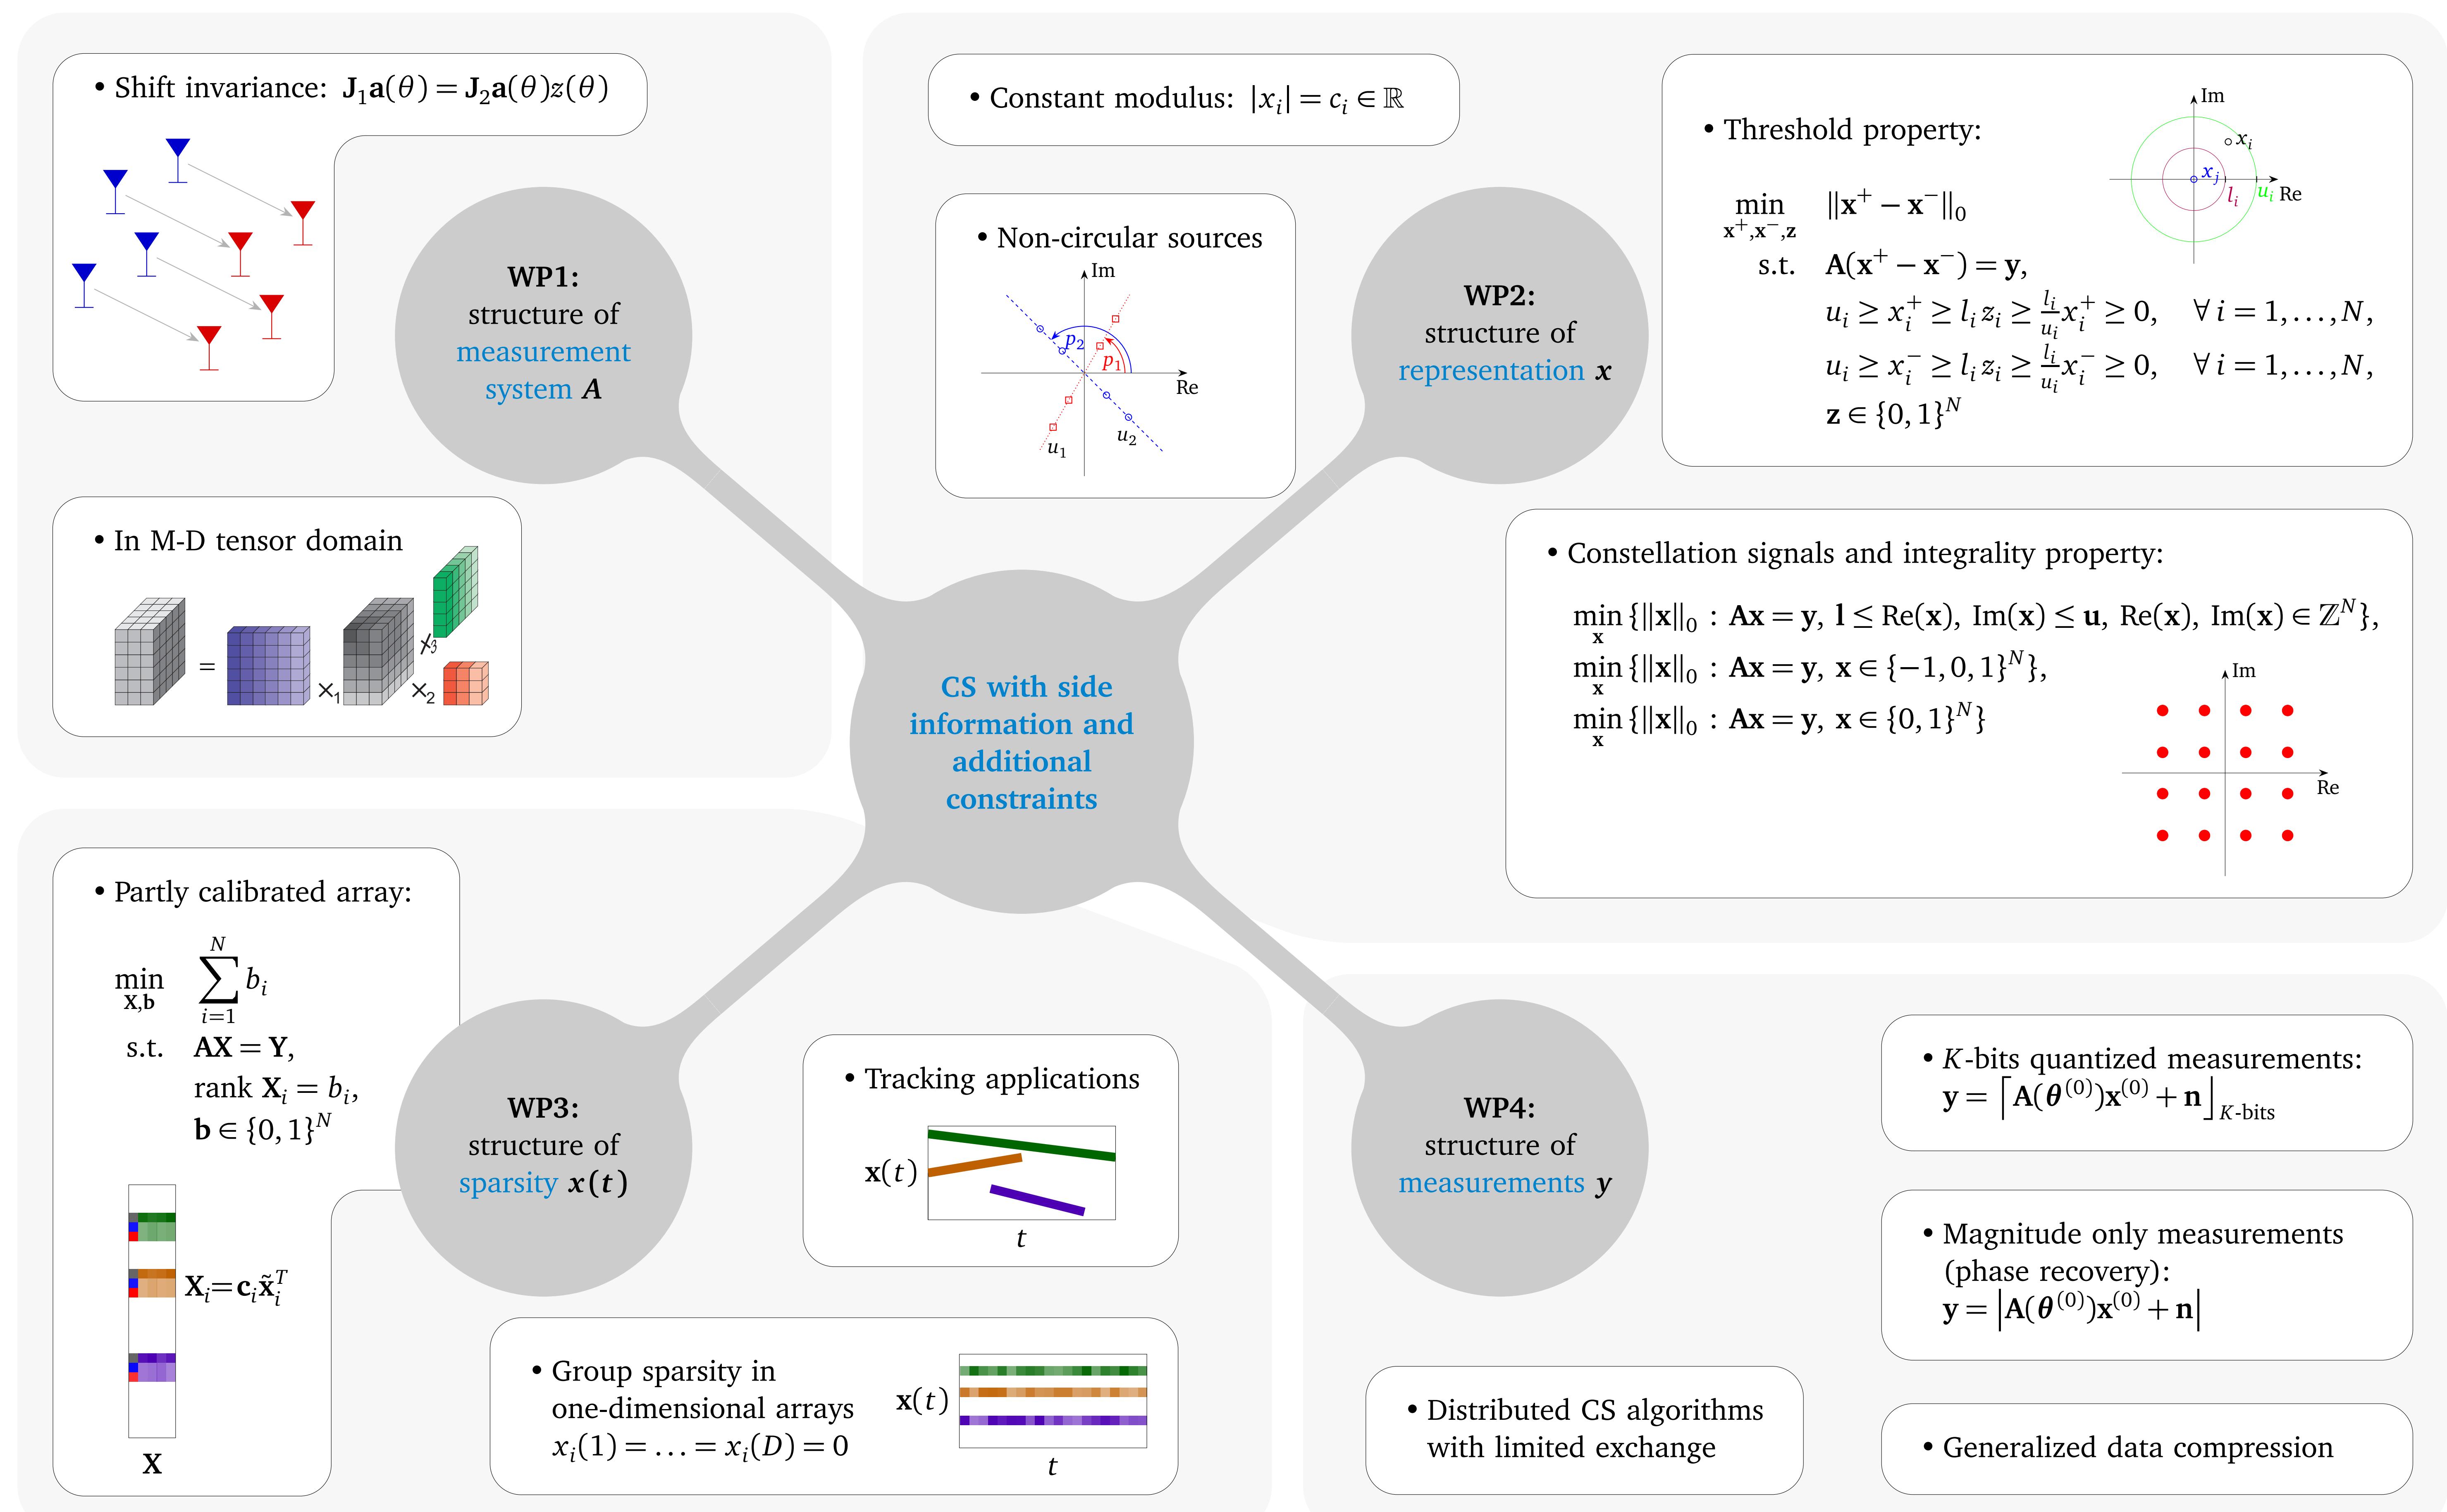

## Research Objectives in EXPRESS

- A) Compressed Sensing (CS) for **parameter estimation** with **structural side constraints**
  - $\ell_0$ -minimization problem:  $\min_{\mathbf{x}} \|\mathbf{x}\|_0 : \mathbf{Ax} = \mathbf{y}$
  - $\ell_1$ -minimization problem:  $\min_{\mathbf{x}} \|\mathbf{x}\|_1 : \mathbf{Ax} = \mathbf{y}$
  - $\ell_0$ -denoising problem:  $\min_{\mathbf{x}} \|\mathbf{x}\|_0 : \|\mathbf{Ax} - \mathbf{y}\|_2 \leq \epsilon$
  - $\ell_1$ -denoising problem:  $\min_{\mathbf{x}} \|\mathbf{x}\|_1 : \|\mathbf{Ax} - \mathbf{y}\|_2 \leq \epsilon$
- B) Novel approach: **model identifiability** using CS  
What is the maximum number  $L^*$  of signal components that can uniquely be identified?  

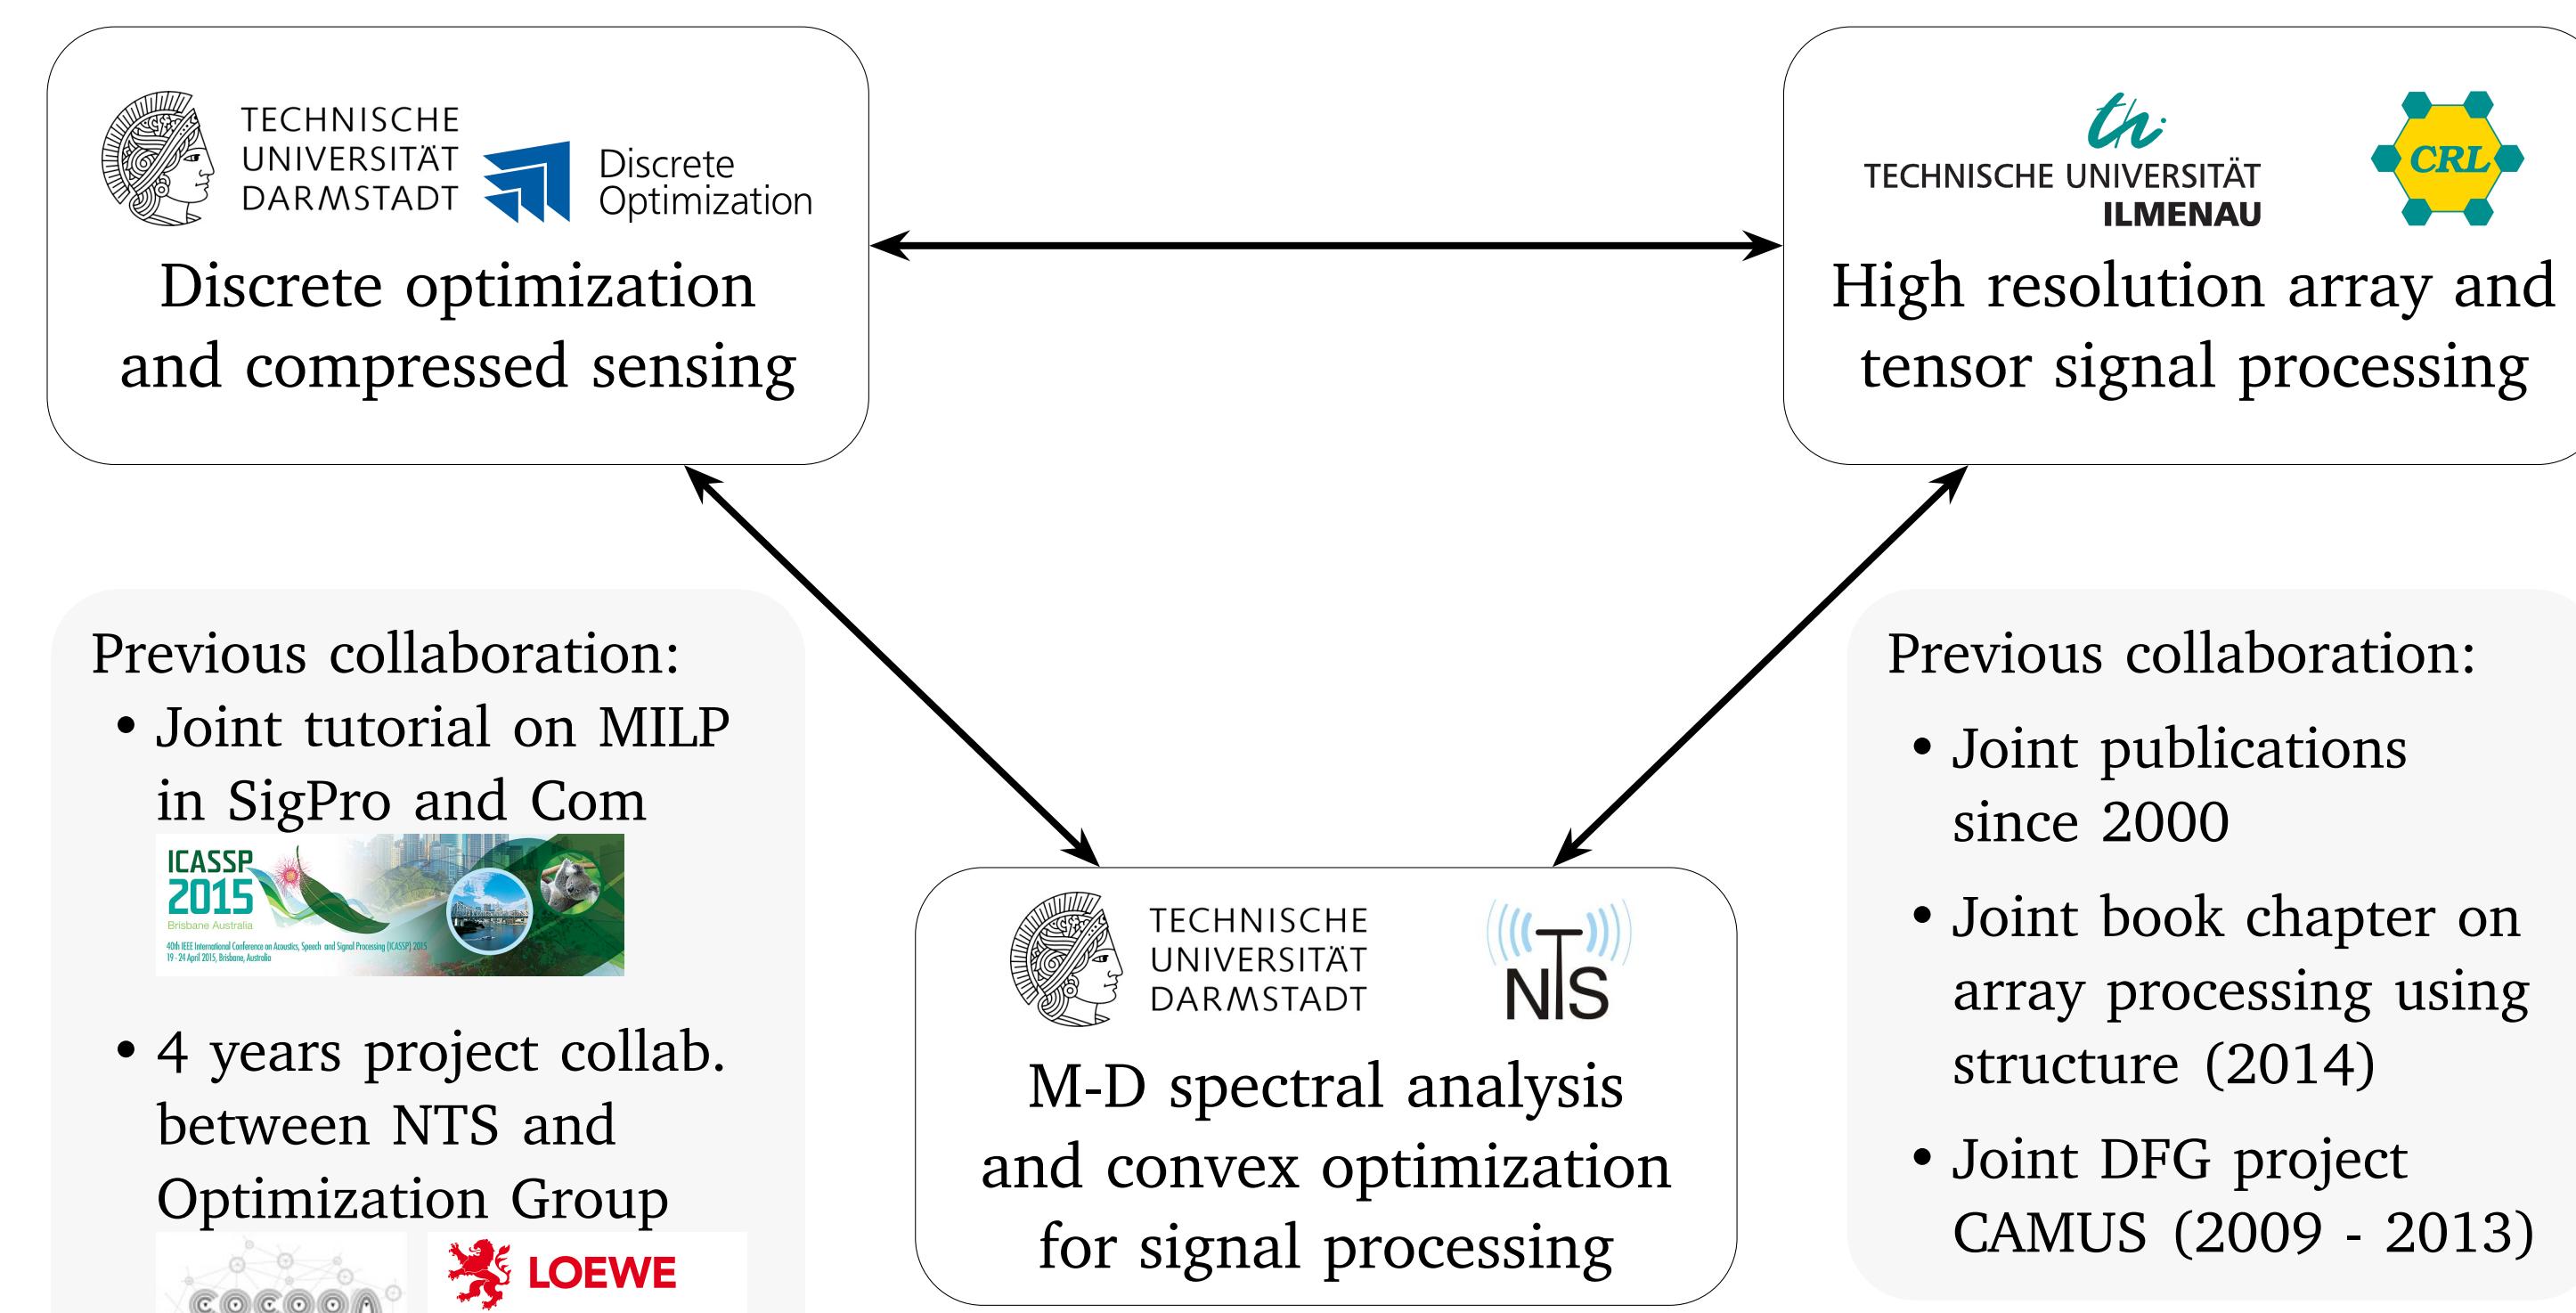

$$\text{Kruskal rank} \quad L^* = \min_{\mathbf{x}} \|\mathbf{x}\|_0 - 1$$

$$\text{subject to } \mathbf{A}(\theta)\mathbf{x} = \mathbf{0}, \quad \|\mathbf{x}\| = 1$$
- C) Handling large problems with **multidimensional (M-D) structures**
- D) Exploring **relationship** between  $\ell_0$  and  $\ell_1$  under side constraints

## Exploiting Different Types of Structure
